FOREWORD

Within limitations which will be enumerated, this directory contains commercial and government boats which operate in their normal procedure on the Mississippi River and its tributaries, on the Alabama River system, the Chattahoochee, on the Intracoastal Waterway both east and west of New Orleans, and in the bayou regions of Louisiana.

Inasmuch as this book is primarily designed to report river vessels, or vessels restricted in depth to utilize inland streams, we have approached such ports as New Orleans, Houston, Galveston, Mobile, etc., with this restriction in mind, and have excluded many deep draft tugs which regularly ply such areas, but which are not classified as river craft.

Also we have excluded a number of self-propelled dredges operated by the Corps of Engineers inasmuch as they are not engaged in handling the river's commerce. Towboats and tugs of the Corps of Engineers have been included, and also the vessels of the U. S. Coast Guard, and properly so, inasmuch as they are engaged in transportation.

In reporting the vessels of the Intracoastal Waterways we have omitted a number of small craft engaged primarily in fishing, and shrimp and oyster industries. Without exception these are motor propelled, and of small horsepower, and in no case do they contribute to the general transportation scheme except in the performance of their local duties. For similar reasons a number of small tugs owned and operated by T. V. A. on the Tennessee River and its tributaries are not included herein.

Specifically, the listing which follows includes:

All steam propelled vessels,

Motor vessels of 100 hp. and over,

Motor vessels of less than 100 hp. of special interest.

Nearly all of the "work boat" fleet of the area is included, inasmuch as vessels of less than 100 hp. are in the minority with a tendency to diminish in numbers as time goes on, a trend brought about by two factors: 1) new vessels being constructed are 100 hp. and over in most cases, and 2) older vessels are being re-engined to bring them into the 100 hp. and over class. As rapidly as this latter circumstance occurs, such vessels are initiated to these pages.

In describing the vessels of the area the term "towboat" is limited to those equipped with squared-off head and towing knees, designed primarily for facing into a tow and handling the tow as a unit, which is the widely adopted style on the Mississippi River and its tributaries. The term "hawser tug" applies to those which are built on the lines of a sea-going tug, with high model bow, and with bitts at the stern for dragging the tow behind. The term "tug" applies to those vessels which generally are hawser-type tugs but which have had towing knees added, usually because their usefulness has brought them out of Gulf waters and into river pursuits. These three types predominate in the area.

Measurements presented in the text are the registered dimensions of hull taken from official records and presented as three groups of figures, as 236 x 44.3 x 7.6. The first figure is the ship's length (usually from stem to rudder post); the second is her width (widest outside dimension of hull) and the third is her depth of hold. This latter figure has no relation to the draft: it is a measurement taken inside the hull from the underside of the main deck perpendicularly to the bottom, amidships. Commercial vessels

are reported in feet and decimal fractions thereof. Government vessels are reported in feet and domestic fractions thereof because this is the scheme of government agencies, and often the reported dimensions of government vessels are "over all" as this is the custom. Some observations may be helpful:

The registered length of a sternwheel vessel does not include the paddlewheel.

The registered width of a side-wheeler does not include the guard or deck beyond the hull line.

The registered length of a propeller boat is usually shorter than the actual over all length inasmuch as the main steering rudders are built in the vessel at some distance from the stern.

Vital statistics of inland river boats formerly stressed a registered tonnage figure, based on internal cubical capacity. This figure has become outmoded and was important in the past when nearly all vessels were cargo carriers. This is not the case in modern times. Hence we have omitted mention of registered tonnage in the descriptions carried herein inasmuch as it is almost meaningless. The present trend is toward the use of horsepower for comparison.

For this reason we have used indicated horsepower in the descriptions. This may be said to be true horsepower and represents the power actually developed within the cylinders of the engines. Although valuable as a comparative figure of power plants, indicated horsepower does not always reflect a true report of the vessel's capacity under actual operating conditions. The reader will discover the term "push horsepower" introduced in descriptions of a few vessels (see CORNELL, LEHIGH, for examples) and this figure represents what the vessel actually can do with what she has in the way of propellers, engines, super-charging, stern design, Kort nozzles, etc., all of which factors immediately effect performance. Tests for "push horsepower" may become standardized and in a few years form a much more accurate judgment of power than any method now in general use.

In preparing the text we have used several abbreviations with consistent uniformity. The small "b." preceding the name of a location means "built." Thus if the line reads "b. Neville Island, Pa." it means the boat was built there. In describing sizes of steamboat machinery we have used the steamboat engineer's lingo; "14's, 28's-7 ft. stroke." This, translated, means the engines are of the compound type, with a high pressure cylinder of 14" diameter and a low pressure cylinder of 28" diameter, and a common stroke of 7 feet. If but one diameter appears, such as "14's-6 ft. stroke" the engines described are 14" diameter (or bore) and the stroke is 6 feet, implying a high pressure job. In all cases, unless otherwise specified, there are two engines to each steamboat identical to the description provided. In several steam installations (ILLINOIS for example) the engine is described as "triple expansion" and four cylinders are noted instead of three. In such cases the third phase of the expansion process is carried into two identical low pressure cylinders for reasons of engine design and economy. In a great many instances the description of a diesel engine is accompanied with a notation such as "10 x 13" and this, in modern jargon, means 10" bore and 13" stroke.

The vessels of the area discussed in these pages are almost entirely work boats designed to shove or pull the some 5000 barges which carry the

bulk of the commerce. Other types, which form the minority, include excursion boats, tourist vessels, ferry boats, railroad car transfers, lighthouse tenders, inspection vessels, and the like.

We might record a developing urgency to move cargo on faster time schedules. Experiments of such nature commenced in 1940 when Socony-Vacuum Oil Co. built a series of "integrated" barges. Ashland Oil & Refining Co. followed suit. Federal Barge Lines in 1947 constructed a fleet in which the towboat is an integral part (see HARRY TRUMAN). Butcher-Arthur and others have added equipment aimed toward shoving a long, slim tow against the current at speeds not considered practical only a few years ago. Push-horsepower and speed, two qualities at antipodes in river marine design over a lengthy stretch of time, seem to have yielded toward a common bonding. In the spring of 1949, Capt. A. C. Ingersoll, Jr. amazed the river-world by sending the HARRY TRUMAN on a special run from New Orleans to St. Louis, handling a pay-cargo of freight, and with avowed intent to breaking the record of the fabulous ROBT. E. LEE. Not since 1870 when the LEE raced the NATCHEZ has any commercial vessel equaled or bettered the time between those terminals. The TRUMAN did not succeed in the mission, but came so very close that old-time rivermen were startled with the shocking fact that for all practical purposes the LEE has met worthy successors in the modern towing fleets designed for rapid passage.

There are numerous catamaran ferryboats on the lower Mississippi (see CITY OF BATON ROUGE, ALGIERS). The advantage of such construction, when applied to either paddlewheel or propeller boat, is largely one of convenience for handling automobiles, there being a wide external deck space with propelling machinery, boilers, etc. confined to a central amidship area.

Packet service on the Mississippi system is extinct in the usual meaning of the term, i. e., a combination freight and passenger vessel operating in a trade. At the present time passengers are regularly carried on scheduled short rides at St. Louis and New Orleans by the modern and attractive excursion boats operated by Streckfus Steamers, Inc. and other towns are served by the steamer AVALON. Greene Line Steamers, Inc. is the only operator of long trips, and their two vessels, the DELTA QUEEN and GORDON C. GREENE, are admirably suited to meet the most exacting demands of the modern tourist who wishes to explore the Mississippi River system in comfort. A number of the larger towing vessels are provided with excellent guest quarters but those fortunates who travel by such means must make personal arrangements with the owning companies.

Practically all of the barge fleet in the area is of steel construction and non-self propelled, and the predominant type is squared off at the ends with scow bow rake, and flat bottomed. Barge construction has become standardized on the whole, mindful of lock restrictions and successful combining into units (tows) for delivery. The usual steel coal barge in the Pittsburgh area measures 175 x 26 x 10'8", is provided with collision bulkheads at the ends, and carries about 900 tons of cargo. The Carnegie-Illinois Steel Corporation has about 400 answering such description and there are some 700 of the type in daily operation on the Monongahela River alone.

The largest of the general merchandise barges are those owned by the Federal Barge Lines which has a fleet of about 40 measuring 300 x 48 with

a loaded draft of 8 feet and cargo capacity of 3000 tons each. Jones & Laughlin Steel Corporation have a specialized cargo barge in which they transport steel products from mill to market, and these measure 132 x 35 with a capacity in the neighborhood of 775 tons. Altogether this fleet comprises some 65 units.

The prevailing common dimensions for what may be termed a standard oil barge is 195 x 35. At either end is a 21-foot collision compartment. The capacity is around 9,350 barrels carried in eight compartments. Self-propelled barges have been tried on inland streams in various guises since Civil War days but the practice has never gained important headway: one such carrier operates today (see REPUBLIC-PITTSBURGH). For those interested in detailed studies of modern towing methods and the engineering details of barge and towboat design, this publication recommends a letter to the Dravo Corporation, Pittsburgh, Pa. This firm long has been the vanguard in experiment and application of new principles not only as apply to the Mississippi and its related problems but also to rivers and waterways of other sections of the United States. Their field of engineering exploration and its practical application has reached to cover the problems of a number of South American streams and in other parts of the world.

No attempt has been made to itemize auxiliary equipment carried on the vessels enumerated herein. Ship-to-shore radio-phone has become commonplace and succeeds the telegraphy installations which first arrived in 1916, we believe, on the INCO NO. 1 and later was generally adopted by Federal Barge. Engineer control from the pilothouse, pioneered on steam ferryboats many years ago, has won acceptance on nearly all of the larger vessels now constructed. Radar arrived on the TRI-STATE in November, 1946, and is on the high road to becoming universal.

It is interesting to notice in a general way that the number of vessels engaged in transportation in the area recorded in these pages is greater than any time in past history. The available horsepower exceeds by far any totals of the "palmy days." All of the available boats and barges back in Mark Twain's day could carry but a fraction of present-day river commerce. When the initial issue of Inland River Record appeared in 1945 there was an almost 50-50 division of steam and diesel propulsion on the Mississippi system. Today, slightly over five years later, diesel towboats almost predominate the region and, should the trend continue at the present amazing pace, it is foreseeable that the steamboat will be extinct as soon as the present equipment is retired. The last steam, sternwheel steamboat build for inland service was the JASON (see) in 1940.

Consider; there never is a sunrise over the cottonwoods of Arkansas, the button-balls along the Ohio, or the willow fringes of the Illinois but what something has changed or altered while quiet tons of water slip to the sea unnoticed. Your Editor realizes that keeping tab on the transportation scheme of so vast an empire is an undertaking which, to be done properly and accurately, would best suit the talents of some three-headed Cerberus. Your Editor does not qualify in this respect, and must go to press with neck stiff and eyes strained and the usual human equipments impaired. He is thankful, and grateful, for the prompt assistance so generously given by a large share of the owning companies who answered questions sent them by mail. He appreciates, also, the efforts of individuals, and particularly those persons enumerated on the title page as an Advisory Board. Also

the Editor wishes to express his thanks to F. A. Gehres, Ross Rogers, Jr., Edward H. Scheibler, James A. Wallen and Paul K. Wabnig for their efforts toward maintaining the accuracy of these listings. The attention of the reader is invited to the advertising section which includes some of the outstanding organizations doing business on the inland waterways. They constitute the financial sponsors of this book.

COMMERCIAL AND GOVERNMENT VESSELS OF
THE MISSISSIPPI RIVER SYSTEM, STREAMS
EMPTYING INTO THE GULF OF MEXICO, AND
THE GULF INTRACOASTAL WATERWAYS, COM-
PILED AS OF JULY 15, 1950

It is suggested the reader acquaint himself with an explanation of symbols, abbreviations, and terms which will be found in the foreword.

A. Baldwin

Steam ferry, catamaran steel hull with center paddlewheel. b. Jeffersonville, Ind., by Howard Ship Yard and Dock Co., 1905. 127 x 58.9 x 7.5. Carries 231 passengers and 35 automobiles. 280 hp. Owned by Bisso Ferry Co., New Orleans, La.

A. B. Sheets

Steam towboat, steel hull, sternwheel. b. Jeffersonville, Ind., by Howard Ship Yard and Dock Co., 1921. 148.5 x 34.4 x 5.6. Condensing engines, 14's, 28's-7 ft. stroke, 700 hp. Four return flue boilers, coal burner. Originally named LA BELLE and owned by Wheeling Steel Corporation who operated her until Nov., 1945. During this ownership sponsors were placed by Dravo on the hull increasing width six feet to dimension shown above. Sold to Zubik Towing Co., Pittsburgh, who renamed her EDW. SMITH, and in 1947 sold her to Hillman Transportation Co. of Pittsburgh, present owner, who again renamed her. This is the second steam towboat named A. B. SHEETS: first was b. Dravosburg, Pa., 1918 originally named SAM BARNUM and renamed A. B. SHEETS in summer of 1921 when purchased by Hillman. This vessel was sold to Charles Zubik in 1947 and decommissioned.

A. C. Jaynes

Steam ferry, steel hull, sternwheel. b. Grafton, Ill., by Midwest Boat & Barge Co., 1925. 125 x 30 x 4.3. Engines 12's, 48's-4 ft. stroke. One boiler, coal burner, 250 hp. Carries 24 automobiles. Originally operated at Cape Girardeau, Mo., then at Greenville, Miss., until bridges were built at those places, and currently operating at Helena, Ark., operated by Capt. A. C. Johnson as Glendale Ferry.

A. G. Thomas

Diesel hawser tug, steel hull, single prop. b. New Orleans, La., by Lester F. Alexander Co., 1948. 46 x 13 (approx.) Atlas Imperial diesel 120 hp. Owned by A. G. Thomas, New Orleans, La.

A. H. DeBardeleben

Diesel hawser tug, steel hull, single prop. b. Madisonville, La., by Equitable Equipment Co., 1943. 75.8 x 23 x 8.5. National Superior 8 cyl. 12½ x 15 diesel 600 hp. Owned by Coyle Lines Incorporated, New Orleans, La.

A. H. Truax

Diesel towboat, steel hull, twin props. b. Chicago, Ill., by Calumet Shipyard and Dry Dock Co., 1946. 132 x 33 x 10. National Superior diesels total 1650 hp. at 280 rpm. Supercharged, 6 cyl. 14½" bore by 20" stroke. Kort nozzles. Owned by Central Barge Co., Chicago, Ill.

A. L. Groteguth, Sr.

Diesel hawser tug, wood hull, twin props. b. Benton Harbor, Mich., by Robinson Marine, 1947. 52 x 12.5. Gray Marine diesels total 450 hp. Owned by Freeport Sulphur Co., Port Sulphur, La.

A. L. Nash

Diesel towboat, steel hull, single prop. b. Manitowoc, Wis., by Manitowoc Shipbuilding Co., 1945. 70 x 22 x 9, drawing 6½ ft. Semi-tunnel stern and modified V bottom. Atlas Imperial, 6 cyl. 11½ x 15, 320 hp. at 325 rpm. Owned by Marine Transit Co., Chicago, Ill.

A. M. Halliday

Steam ferry, catamaran steel hull, center paddlewheel. b. Jeffersonville, Ind., by Howard Ship Yard and Dock Co., 1903. 121 x 59 x 7.7. Engines built by Ainslee-Cochran Co., 16's-6 ft. stroke. One boiler. 450 hp. Allowed 225 passengers, 30 automobiles. Owned by Algiers Public Service Co., New Orleans, La.

A. M. Thompson

Diesel towboat, steel hull, twin props. b. Chicago, Ill., by Calumet Shipyard and Dry Dock Co., 1949. 142 x 34 x 9'10". Two Enterprise diesels, 8 cyl. 16 x 20, total 2600 hp. Kort nozzles. Owned by Central Barge Co., Chicago, Ill.

A. V. Criss

Diesel towboat, composite hull, sternwheel. b. Paducah, Ky., 1938. 78.6 x 18.8 x 4.1. Two G-M diesels, 400 hp., placed 1947. Originally owned by Indiana Towing Co., Corydon, Ind., and had F-M diesel, 280 hp. Burned March 12, 1944, at Louisville, Ky., and later rebuilt. Sold to Tri-State Materials Corp., Charleston, W. Va., in February, 1946, renamed several months later. Originally called BETTY GARDNER.

Ace

Diesel hawser tug, steel hull, single prop. b. Houston, Texas, by owner, 1945. 60 x 16 x 7.5. Enterprise 8 cyl. 15 x 16 diesel 400 hp. at 400 rpm. Owned by Bonner Towing Co., LaPorte, Texas.

Ace

Diesel towboat, steel hull, twin props. b. Nashville, Tenn., by Nashville Bridge Co., 1930. 81 x 20 x 6. Atlas Imperial diesels total 280 hp., direct reversible type, 8½ x 12. Original owner was John Archbold Coal Co., Evansville, Ind. Sold to Producers Pipe Line Co. who operated her until Dec. 1949 when sold to Nashville Bridge Co. Again sold in spring of 1950 to Iger, Inc., Paducah, Ky.

Adaline II.

Diesel towboat, wood hull, sternwheel. b. Knoxville, Tenn., 1936. 50 x 13.3 x 3. Cummins supercharged diesel 200 hp. Owned by Knoxville Sangravl Material Co., Knoxville, Tenn.

Admiral

Steam excursion boat, steel hull, side-wheel. b. St. Louis, Mo., by Streckfus Steamers, Inc., 1938-40. 365 x 53.8 x 7.6. Rated 1557 tons. High pressure engines, 26's-10 ft. stroke, 1500 hp. Allowed 4000 passengers. Constructed on hull of former railroad transfer ALBATROSS (b. Dubuque, Iowa, 1907, lengthened Rock Island, Ill., 1921). Great stress on streamlining and application of modern metal design. Entirely air-conditioned with no outside guards, almost invisible stacks, wheelhouses entirely unaccented, boilers in the hold, no gangplank. Owned by her builders, Streckfus Steamers, Inc., St. Louis, Mo.

Admiral

Diesel hawser tug, wood hull, single prop. b. Orange, Tex., 1930. 47.8 x 13.8 x 4.8. Atlas Imperial, 6 cyl., 9 x 12 engine, 160 hp. Owned by Sabine Transportation Co., Inc., Port Arthur, Tex.

Advance

Diesel towboat, steel hull, twin props. b. Jeffersonville, Ind., by Jeffersonville Boat and Machine Co., 1949. Originally LSM 375 b. Orange, Texas, 1944, and entirely remodeled into a river towboat. 147.5 x 34 x 8.8. Fairbanks-Morse 10 cyl. 8 x 10 diesels total 2880 hp. at 720 rpm. Owned by American Barge Line Co., Louisville, Ky.

Agnes

Diesel hawser tug, wood hull, single prop. b. Plaquemine, La., 1935. 40 x 12 x 5. Caterpillar 6 cyl. diesel 100 hp. at 450 rpm. Reduction gear 2 to 1. Owned by Cenac Towing Co., Houma, La.

Agnes H.

Tug owned by O. J. Schwabe, Houston, Texas. No details.

Agnes M.

Diesel hawser tug, wood hull, single prop. b. Plaquemine, La., 1915. 43 x 10.8 x 3.4. Caterpillar diesel 100 hp. Owned by Louis Berwick, Port Arthur, Texas.

Ahepa

Diesel hawser tug, wood hull, prop. b. Pascagoula, Miss., 1937. 46.3 x 12.6 x 6. 350 hp. Owned by George Bacon, Houston, Texas, and reported sold, 1948, to B. K. Swansey, Houston, Texas.

Ajax

Diesel hawser tug, steel hull, single prop. b. New Orleans, 1949. 55' long. General Motors diesel 300 hp. at 350 rpm. Owned by Guidry and Savoie, Cut-Off, La.

Ajax

Diesel hawser tug, steel hull, single prop. b. Orange, Tex., by Livingston Shipbuilding Co., 1944. 68.3 x 20 x 8.3. Atlas Imperial 6 cyl. 13 x 16, 4 cycle engine, 400 hp. Sister ship to the GOLIATH, see. Owned by Sabine Transportation Co., Port Arthur, Texas.

Alabama

Diesel towboat, steel hull, twin props. b. Ambridge, Pa., by American Bridge Co., 1928. 140 x 25 x 8.7. General Motors 8½ x 10 12 cyl. diesels total 1080 hp. at 170 rpm. Diesel-electric drive. Present engine installed fall of 1950. Owned by Warrior & Gulf Navigation Co., Chickasaw, Ala.

Alan R. Merrill

Diesel towboat, steel hull, twin props. b. St. Louis, Mo., by St. Louis Shipbuilding and Steel Co., 1936. 92 x 20.2 x 6.6. Fairbanks Morse diesels placed 1949 total 600 hp. Originally named SENATOR COMBS owned by Ashland Oil & Refining Corp. and sold to present owner, Jan. 1949, who had boat rebuilt, adding 16 ft. to original length, placed new engines, and renamed her. Owned by Cpts. Charles C. and Charles Henry Stone, Pt. Pleasant, W. Va.

Albany

Steam snagboat, composite hull, sternwheel. b. New Orleans, La., 1926. 135'8½" x 32'0" x 5'6". Single stack. Engines 10's-4 ft. stroke made by Iowa Machine Works. One Scotch marine boiler by John H. Murphy Iron Works. 150 hp. Operated on Chattahoochee-Flint-Apalachicola rivers and St. Marks river, Fla. Owned by U. S. Engineer Corps, Mobile, Ala.

Albert E. Heekin

Diesel towboat, steel hull, twin props. b. Neville Island, Pa., by Dravo Corporation, 1941. 145 x 27 x 11.8. Cooper-Bessemer 6 cyl. 13 x 16 supercharged diesels total 1000 hp. at 315 rpm. Kort nozzles. Similar in design to DUCTILLITE and SEMET but longer in hull 10 feet. Originally owned by Campbell Transportation Co.; now owned by Mississippi Valley Barge Line Co., St. Louis, Mo.

Albert Rowse

Diesel towboat, steel hull, single prop. b. St. Louis, Mo., by St. Louis Shipbuilding & Steel Co., 1938. 59'9" x 14' x 5'9". Superior 8 cyl. 8½ x 10½ diesel 300 hp. at 450 rpm. installed 1948. Sister boat to CHARLES FOLSOM (see). Owned by Corps of Engineers, Kansas City, Mo.

Alec Parnie

Diesel towboat, steel hull, sternwheel. b. Jeffersonville, Ind., by Howard Ship Yard and Dock Co., 1925. 107.2 x 23 x 4.5. Engines have not been placed; rebuilding program in progress. Originally was a steam stern-

wheel towboat with 10's-5 ft. machinery and two return flue boilers, and was named CHICOT, owned by U. S. Engineers, Vicksburg. In June, 1941, sold to Commercial Barge Lines, Inc., of Evansville, Ind., and renamed JEROME D. BEELER, and again renamed 1943 to ALEC PARNIE and again sold, April, 1946, to Capt. C. C. Stone of Pt. Pleasant, W. Va., who plans conversion to about 500 hp. diesel.

Alela

Motor tug, wood hull, prop. b. 1916. 37.3 x 10.3 x 3.5. 150 hp. Owned by Paul Hardcastle, Beaumont, Texas.

Alexander

Diesel towboat, steel hull, twin props. b. New Orleans, La., by Alexander Shipyards, Inc., 1948. 116.5 x 40 x 11. Fairbanks-Morse opposed piston diesels total 3200 hp. at 720 rpm. Universal reduction gears. Owned by Alexander Shipyards, Inc., New Orleans, La., and sold to Upper Mississippi Towing Corp., spring of 1950.

Alexander Mackenzie

Steam towboat, steel hull, sternwheel. b. Point Pleasant, W. Va., by Marietta Manufacturing Co., 1939. 167 x 37.5 x 8.4. Condensing engines, 16's, 32's-10 ft. stroke, 1600 hp. Two Foster-Wheeler boilers, coal burner. Almost an exact duplicate of the JASON, which see. Owned by Central Barge Co., Chicago, Ill.

Alfred B.

Diesel towboat, steel hull, single prop. b. Valley Park, Mo., by Barbour Metal Boat Works, 1945. 45 x 12 x 3. Caterpillar diesel, 100 hp. 2:1 reduction gear. Owned by Ferd J. Robers Construction Co., Burlington, Wis.

Alibi II.

Motor runabout, wood hull, twin props. b. Houston, Texas, by owner, 1938. 28 x 9 x 4.5. Sterling engines 225 hp. Owned by Parker Bros. & Co., Houston, Texas.

Alice

Diesel towboat, steel hull, single prop. b. Paducah, Ky., by Paducah Marine Ways, Inc., 1949. 74 x 18 x 8.5. Fairbanks-Morse 8 cyl. 8½ x 11½ diesel 500 hp. at 540 rpm. Reduction gear 2:1. Owned by Crounse Corp., Paducah, Ky.

Alice H.

Diesel hawser tug, wood hull, single prop. b. Beaumont, Texas, 1919. 42.7 x 10 x 3. General Motors diesel 165 hp. installed 1949. Owned by O. J. Schwabe, Houston, Texas.

Alice Ingram

Diesel towboat, steel hull, twin props. b. Nashville, Tenn., by Nashville Bridge Co., 1950. 74 x 22.6 x 8.5. General Motors Model 6-71 in quads total 1000 hp. at 400 rpm. Reduction ration 4 to 1. Retractable pilothouse. Owned by Ingram Products Co., Nashville, Tenn.

Aliquippa

Steam towboat, steel hull, sternwheel. b. Pittsburgh, Pa., by James Rees & Sons Co. on bank of the Allegheny River, 1914. 152 x 29.1 x 4.8. Rees condensing engines, 14's, 28's-7 ft. stroke, 600 hp. Four return flue boilers, coal burner. Owned by Jones & Laughlin Steel Corp., Pittsburgh, Pa.

Algiers

Steam ferry, catamaran steel hull, center paddlewheel. b. Jeffersonville, Ind., by Howard Ship Yard and Dock Co., 1925. 144 x 55 x 7.7. Engines 18's-6 ft. stroke by Iowa Machine Works. Two return flue boilers. Sister boat to the NEW ORLEANS, which see. 600 hp. Allowed 800 passengers, 40 automobiles. Owned by Algiers Public Service Co., New Orleans, La.

Allan W.

Diesel hawser tug, steel hull, twin props. b. Houston, Texas, by owner, 1947. Two International diesels total 250 hp. Owned by Parker Brothers & Co., Houston, Texas.

Allegheny

Steam towboat, steel hull, sternwheel. b. Pittsburgh, Pa., by James Rees & Sons Co. on bank of the Allegheny River, 1905. 134.4 x 27.7 x 5.9. Condensing engines, 12's, 24's-6 ft. stroke. Three return flue boilers, coal burner, 450 hp. Originally named HENRY A. LAUGHLIN and first owned by Jones & Laughlin Steel Corp. who later renamed her SHANNOPIN, shortly sold her (1932) to Campbell Transportation Co., Pittsburgh, who renamed her FAIRPLAY. During this ownership she was widened with sponson hull, increasing original width from 23.3 ft. to 27.7 ft. In 1941 the vessel was bought by Hillman Transportation Co., Pittsburgh, and renamed JOHN L. HOWDER. About June 1, 1945 she was sold to present owner who changed the name to ALLEGHENY. Owned by Crain Bros., Pittsburgh, Pa.

Allen

Motor tug, wood hull, prop. b. 1913 at Houma, La. 58.5 x 16.2 x 4.5. 120 hp. Owned for a time by Bayside Oil Co., Inc. Presently owned by Chester Guidroz, Berwick, La.

Allen B. Wood

Steam towboat, steel hull, twin props. b. Savage, Minn., by Cargill, Inc., and completed at Pidgeon-Thomas Iron Works Co., Memphis, 1943. For details of construction see ATTU. Originally named MILNE BAY and chartered to Mississippi Valley Barge Line Co. until Sept. 1945. ESSO STANDARD OIL COMPANY

Here's another example of the modern approach in meeting industry's insistence on "the right tool for the right job."

Engineers of The Dow Chemical Company and Dravo naval architects collaborated in designing a new fleet of five barges to be used exclusively for transportation of hydrochloric acid. Each of the barges—built by Dravo—carries four 58,400 gallon rubber-lined tanks, 12-feet in diameter and 73-feet long, the largest of their kind ever installed on a barge. Details of construction, such as central positioning of all four tank domes, self-draining working platforms, and use of non-slip deck coatings were carefully engineered for maximum efficiency and safety.

If you are thinking of improving or extending your service in the movement of more varied types of cargo . . . if specialized barges can help you handle more tonnage at lower cost, Dravo experience in building "tailor-made" craft can eliminate expensive guess and gamble in working out details of your job. A Dravo representative will be glad to talk things over with you.

BROKEN BARGE
straightened
IN 15 MINUTES!

10:42 A.M. This barge, broken in the middle by improper loading, is positioned on Dravo's multiple cradles, which are set to a calculated profile-pattern.

10:46 A.M. Winches start the carriages toward shore. The original distortion of almost 4 feet has already been reduced by approximately half.

10:48 A.M. Further shoreward movement produces further correction. One-man control of synchronized carriage movement eliminates any lateral stressing.

10:51 A.M. The hull clears the water. The straightening operation is virtually completed, without expending a single man-hour of direct labor.

10:57 A.M. Docking completed. Note horizontal and vertical alignment. Replacement of stressed plates completed the repairs, restored the barge to service.

We'll be glad to demonstrate the extra value of the highly engineered facilities at Dravo's Marine Ways on your next repair, reconditioning or maintenance job.

FITLER MARINE ROPE

STRONG — DURABLE — FLEXIBLE

“WATERPROOFED”

A Standard River Rope that has proven its superiority over a period of many years. Trade marked for your protection with a Blue and Yellow colored yarn on the outside of 5/8" diameter and larger sizes and on the inside of smaller sizes.

Filament Nylon Rope

This is the original sleek, silky Nylon made from continuous filaments that run as unbroken threads for the entire length of the rope. Continuous filament Nylon is tops in appearance and has the greatest breaking strength.

Spun Staple Nylon Rope

This rope is made from the same first quality, new Nylon as Filament Nylon Rope, converted by special process into Spun Staple Nylon and then manufactured into rope the same as you would handle staple cotton fiber.

The surface of Spun Staple Nylon Rope is not quite so smooth and lustrous. However, this rope will hold knots and splices more securely than Filament Nylon and the rope will not slip through the hands or over the cleats when wet. It has the durability of Filament and is about 85¢ as strong.

USING THE RIVERS MORE... SERVING RIVER BOATS BETTER

Boats of the Ashland Oil fleet ran up a total of more than a billion ton miles of cargo movement on rivers of the Ohio-Mississippi system in 1949. Cargo included crude oil, refined petroleum products and miscellaneous tows carried under contract.

Ashland Oil also has convenient facilities for supplying other towboats with Ashland Diesel Fuel at these six company river terminals: Floreffe, Pa., on the Monongahela; Kenova, W. Va.; Evansville, Ind.; Clarksville, Ind., opposite Louisville, Ky.; Paducah, Ky., on the Ohio; Nashville, Tenn., on the Cumberland.

Way's Directory of Western River Packets

§ § §

This volume is unique in being the only available book telling the stories of many of the famous side-wheel and sternwheel packets which once plied the Mississippi River system. Over 1800 of them are treated in detail. This Directory was prepared in response to popular demand. Contains about 370 large sized pages done in mimeograph, attractively bound in permanent buckram cloth. Over 2800 rivermen are mentioned by name and indexed by page reference in a special section.

Also this book tells how you may procure photographs of nearly every steamboat described in the text.

Edition is limited to 450 copies. After this supply is exhausted no further copies will be available; the stencils have been destroyed and a second printing is not possible.

The price is \$8.00 the copy. We pay mailing costs. Send your check and ask for "Way's Steamboat Directory."
